

Every screen in the economy

The complete screen inventory — what each screen is for, how it's laid out, what it says, how it moves, and the decisions that are yours to make. Eras: **SPROUT 3-5**

SAPLING 6-9 **GROVE 10-13** **CANOPY 14-17** **HARVEST 18**. Status: **BUILT** means it exists in the repo today; **V1** ships in the App Store release; **V2** / **V3** come later. Every card ends with *Your call* — the open design decisions I need your taste on.

1 • The kid's app – v1 (Sprout & Sapling)

The kid side is the product. Sprout is a toy; Sapling is a storybook town. Nothing here may feel like a bank.

The Jar

SPROUT
BUILT

JOB	The whole app for a 4-year-old. One object, two actions, zero navigation. Money is coins in a jar you can almost touch.
LAYOUT	Giant count in the money font (8), one line of words under it, the jar filling ~60% of the screen, two river-stone buttons. Nothing else. The sprout on the lid gains a leaf at savings milestones.
COPY	“Mints in your jar” · “You earned 5 Mints!” — five words or fewer, always.
MOTION	Sprout sways every ~20s (idle life). Add: coin drops from above, bounces twice, settles; +1 floats up; clink sound, pitch rising per earn in a session.
STATES	Empty jar shows one seed at the bottom: “Do a job. Grow a Mint.” Spend opens a picture-only store sheet (no reading required).

YOUR CALL

- Jar style: mason jar (current), honey pot, or fishbowl?
- Should the count be spoken aloud on tap for pre-readers?
- Background: plain cream (current) or the meadow scene behind the jar?

Kid Home

SAPLING

BUILT

JOB	The town square. Answers three kid questions in one glance: how much do I have, how close is my goal, what can I do to earn more.
LAYOUT	Scenic hero with curved bottom (mountains, pines, growing mint sprig), balance floating on it. Three pastel stat blocks (+18 this week / saved up / jobs open). Berry goal card with Growth Ring around a photo of the actual thing. Jobs preview. Store shelf preview. Dark evergreen pill nav: Home · Jobs · Store · Bank.
COPY	"Hi, Maya" · "12 more Mints to your goal." Kid is always "you". No exclamation points on anything negative.
MOTION	Ring ticks forward when balance changes. Scene parallaxes very slightly on scroll (fade-only under reduced motion).

YOUR CALL

- Scene: one fixed valley, or does it change with seasons / time of day?
- Should the scene visibly grow with total savings (more trees, taller sprig) — the home screen as garden?
- Stat blocks: keep three, or two bigger ones (this week + goal)?

Jobs Board – kid

SAPLING

V1

JOB	Where money is earned. Chores the parent posted, plus the kid's own pitches, on one board.
LAYOUT	Quest cards: left color spine (evergreen = chore, berry = your pitch), title, reward in gold, due chip. One tap flips the card to detail: what to do, then a single big button "I did it" → status becomes "waiting for Mom/Dad". A floating dashed "+" card at top: "Pitch a job" .
COPY	"Water the garden · 8 Mints" · after submit: "Nice. Waiting for Dad to check."
MOTION	Card flip on open. On approval (push arrives): the card celebrates — spine flashes gold, coins hop to the nav's Bank icon.
STATES	Empty board: "No jobs right now. Pitch one?" — the empty state sells the pitch mechanic.

YOUR CALL

- Recurring chores: show every week as a fresh card, or a persistent card with a weekly checkmark streak?
- Do completed jobs stay visible (a "done pile" that grows, satisfying) or vanish?

Pitch a Job – the soul

SAPLING

V1

JOB	The most important behavior we teach: name your work, name your price, negotiate. This screen must look unlike everything else — dashed border, lightbulb, special.
LAYOUT	Two fields, huge: what will you do (text), what is it worth (number stepper with the leaf coin). One button: “Send my pitch” . After sending, the pitch card lives on the board with a "waiting" state. If the parent counters: the card opens showing both numbers — “You asked 25. Dad offers 15.” — with “Deal” and “No thanks” . Full history stays on the card forever (their first negotiation, preserved).
COPY	Placeholder text does the teaching: “Wash the car, rake the leaves, read to your sister...”
MOTION	Send: the card folds into a paper plane and flies to the top of the board. Deal: both numbers merge into one, ring ticks.

YOUR CALL

- Price input: free number, or a slider with the family's typical range hinted?
- Paper-plane send animation — charming or too cute? It sets the tone for the whole mechanic.
- Should a declined pitch offer a gentle retry prompt (**“Try a smaller job?”**) or stay silent?

House Store

SAPLING

V1

JOB	Where Mints become real life. Family-priced privileges on drawn shelves — it should read as a tiny storefront, not a list.
LAYOUT	Items sit on 3px evergreen shelves with bracket feet. Each: emoji, name, price in gold, Buy. Affordable items glow softly; unaffordable ones stay full-color (never grayed out — aspiration, not punishment) with the gap shown.
COPY	Insufficient funds is math, never shame: “You have 40. This costs 75. 35 to go.” with a jump to the jobs board.
MOTION	Buy: the item card flips to a <i>ticket</i> — a real-looking perforated stub the kid shows the parent. Ticket sits in a "my tickets" pocket until the parent marks it done.

YOUR CALL

- Ticket look: carnival stub, cinema ticket, or receipt? This becomes a collectible.
- Do spent tickets archive into a scrapbook (memory value) or disappear?

The Bank

SAPLING

V1

JOB	Two-pocket money made physical: Wallet (spend) and Savings (grow), later Vault and Education. Teaches the single most valuable habit: moving money on purpose.
LAYOUT	Each account is a vessel: wallet = open pouch, savings = jar with a sprout, vault = strongbox, education = graduation-cap jar. Balances in the money font. Tap-and-drag (or tap-tap) between vessels opens the transfer sheet: amount stepper, one confirm.
COPY	“Move 10 to Savings?” · after: “Savings grew.”
MOTION	The signature: coins arc from vessel to vessel; the receiving Growth Ring ticks forward. Interest day (below) happens here.

YOUR CALL

- Vessel metaphors above — right set? (This is the app's second-most-drawn illustration set.)
- Drag-to-move vs tap-tap: drag is delightful but harder at 6; ship both?

Interest Day

SAPLING

V1

JOB	The weekly proof that saved money grows by itself. The moment must feel like receiving mail, not reading a statement.
LAYOUT	Not a screen — an event on the Bank screen. A small envelope slides in, opens; coins hop into Savings; the ring ticks. A one-line note: “Your savings grew 2 Mints while you slept.”
MOTION	Envelope slide + soft chime (respects mute). Under reduced motion: fade in the note.

YOUR CALL

- Sunday morning or Monday after school — when does interest feel best?
- Envelope sender: "The Bank", the family name, or the sprout itself?

Goals

SAPLING

V1

JOB	Wanting something specific is the engine of saving. A goal is a photo of the real thing with a ring growing around it.
LAYOUT	Create: camera/photo picker, name, price. Detail: the photo in a circle, Growth Ring filling clockwise, “12 more Mints to your goal.” , an “Add Mints” button, and a small forecast line: “About 3 more weeks at your pace.”
MOTION	Ring fill on every deposit. At 100%: the ring blooms — leaves unfurl around the photo — then converts to a Buy ticket.

YOUR CALL

- One goal at a time (focus) or up to three (siblings will compare)?
- The pace forecast — motivating or pressure? Include at Sapling or hold for Grove?

The Vault

SAPLING

V1

JOB	Delayed gratification with teeth: lock Mints for 30/60/90 days at better rates. Early withdrawal isn't penalized — it's impossible. Simpler to teach.
LAYOUT	Three lock choices as chunky physical switches with rates in gold. Locked state: strongbox with a ring counting down the days, unlock date written like a birthday: “Opens March 4.”
MOTION	Locking: the lid shuts with a satisfying clunk. Unlock day: the box springs open — a genuine celebration, coins + chime.

YOUR CALL

- Do we show accrued interest live inside the locked box, or reveal it only at opening (surprise value)?

Education Vault

SAPLING+

V1

JOB	The long jar. Kid deposits are matched by real-world action: the parent gets a 529 prompt and, when they confirm, bonus Mints mint on the kid's side.
LAYOUT	Kid side: a jar that never opens, tallest ring in the app, copy about the future self. Parent side (in their app): deep-link to CollegeAdvantage (or their own link) + “Match settled” confirmation.
COPY	“This jar is for grown-up you. It only ever grows.”

YOUR CALL

- Match ratio default (1:1? 2:1?) and whether the kid sees that the match came from a real account.

Activity

SAPLING+

V1

JOB	The ledger, kid-readable. Every Mint's story — earned, moved, spent, grown — because the append-only ledger is the product's honesty made visible.
LAYOUT	A vertical vine. Each transaction is a leaf on it: icon by kind (job, store, interest, move), plain sentence, amount signed and colored with arrows. Grouped by week: “This week you grew 23 Mints.”

YOUR CALL

- Vine metaphor vs plain grouped list — how literal should the growth language get here?

Era Graduation

EVERY ERA

V1 MECHANISM

JOB	The parent decides readiness; the kid experiences a rite. The app visibly grows up in the kid's hands — this is the brand promise performed.
LAYOUT	Full-screen takeover on next open. Three beats: (1) the old era's leaf grows into the new one, morphing on the coin; (2) “You're ready for more.” + two lines about what unlocks; (3) the UI itself transitions — corners sharpen, colors shift — live, in front of them.
MOTION	The token transition is the animation: radius, palette, and type interpolate over ~2s. Sound: the era chime (one of the two allowed sounds after Sapling).

YOUR CALL

- Can the kid replay the ceremony from settings, or is it once-only (scarcity = memory)?
- Should the parent get a recording/screenshot moment auto-offered?

2 • The kid's app — later eras

Grove is v2 ("your kid unlocked credit" is the marketing beat). Canopy is v3. Harvest ships in v1's code, unreachable — the north star costs one screen.

Money HQ

GROVE

V2

JOB	The home screen becomes a command center. Dark by default — presented as a rite of passage, not a toggle. First boot: the screen "powers on": "Welcome to Money HQ." Kids will screenshot it.
LAYOUT	Dense on purpose: net worth ticker (counts digit by digit, never fades), fund sparklines, credit dial, bills due strip, jobs. Data becomes decoration. Cards separate by tone, not shadow.
COPY	Straight facts, light edge: "Rocket Fund fell 8%. That is what high risk means."

YOUR CALL

- How dangerous should Grove feel? Current spec is "strategy game"; the alternative is "trading terminal". One notch matters at 11.

Funds • Loans • Credit • Bills

GROVE

V2

JOB	Four lessons: volatility (three fictional funds, server-driven weekly walk — the Rocket Fund lesson happens on its own), debt (loan term sheets, serious on purpose; payoff is one of two sound moments), reputation (family credit score 600 start, +12 on-time / –18 missed, needle sweeps on change), and obligations (Life Mode rent/internet/phone — rent secretly routes to the kid's savings for the graduation reveal).
LAYOUT	Funds: sparkline cards + buy/sell in whole Mints. Loans: label column / value column / two buttons. Credit: half-arc dial owns violet. Bills: due-date strip with autopay toggle.

YOUR CALL

- Fund names/personalities (Rocket / Steady / Seed?) — you get to name the kid's first market.
- Missed-payment shake + red: harsh enough to sting once, or add a "grace day"?

Canopy: Paycheck · Curve · Shadow Portfolio

CANOPY

V3

JOB Clean fintech a 16-year-old would choose. Paycheck screen shows gross→streams (family tax, vacation, charity) as a tappable flow — the era's one rich visual. Compound screen: a projection curve you scrub with a thumb, watching the age-45 number swing. Shadow portfolio: real tickers, live prices, ghost icon — real market, zero risk, side by side with the real custodial account when parents enable it.

COPY Adult, plain, no hype: **“Gross pay 100. Family tax 10. Net 90.”**

YOUR CALL

- Does Canopy keep any illustration at all (spec says almost none) — or one hidden sprig somewhere as a signature?

Harvest — the ceremony

HARVEST 18

IN V1, UNREACHABLE

JOB Experienced once, designed like the last scene of a film. KPI: the parent screenshots and posts it.

LAYOUT Near-black, gold, and the only serif the product will ever show (Fraunces — the diploma face). Stats reveal like credits, 350ms apart: years in the economy, Mints grown, jobs done, the loan paid in full. Then the final act: the savings ring unwinds, travels, and re-forms as the logo of the real account it just became.

COPY **“You are ready for the real one.”**

YOUR CALL

- Which real-account partners appear in the final morph (this is a partnership decision as much as design)?

3 · The parent's app

Same design system, calmer registers. The metric that rules every parent screen: total daily time under 60 seconds.

Onboarding

PARENT

BUILT

JOB

Download → working economy in under 3 minutes, timed. Four steps, every default pre-filled: name the economy + currency → add kids (era suggested from birth year, editable; weekly base income) → stock the store from templates → confirm.

COPY

Kitchen-table, zero jargon: **"A nickname is fine."**

YOUR CALL

- Sign in with Apple screen tone: playful (matches kid side) or straight (matches banks)? First impression of trust.
- Currency naming: offer suggestions (Acorns, Stars, Berries) or leave it blank-slate?

Parent Home

PARENT

BUILT

JOB

Every kid at a glance: four balances, era, weekly income, and the approvals badge. Era advancement lives here behind a deliberate confirmation (**"Begin the ceremony"**).

YOUR CALL

- Should parent home lead with kids (current) or with the approvals inbox when anything is pending?

Approvals Inbox – the 10-second screen

PARENT

V1

JOB	The screen that decides whether parents stay. Every pending thing — job done, pitch made, ticket to fulfill — in one list, each resolvable in one tap. Target: under 10 seconds a day.
LAYOUT	Cards sorted oldest-first. Each: kid avatar, one plain sentence ("Maya says she watered the garden · 8"), and inline actions — Approve / Not yet, Accept / Counter / Decline, Done. Counter expands a number field in place; nothing navigates away. Empty state is the reward: "All caught up." with a tiny meadow.
MOTION	Approve: the card folds away and the next slides up — inbox-zero momentum. A subtle running count: 3 → 2 → 1 → 🌱 .

YOUR CALL

- Batch-approve ("approve all chores") — huge time-saver, but does it cheapen the kid's moment?
- Should declining always require a reason the kid sees (teaches), or is silence okay?

Respond to a Pitch

PARENT

V1

JOB	The other half of the soul. The parent sees the kid's own words and price, then: Accept, Counter (number + optional note), or Decline (reason required — spec: teaching moment).
LAYOUT	The kid's pitch shown as they wrote it — same dashed card the kid sees, building shared language. Three buttons, counter inline.
COPY	Counter helper text nudges pedagogy: "A counter teaches more than a no."

YOUR CALL

- Decline reasons: free text, or a picker (too big a job / not this week / let's talk) that keeps it kind?

Store Manager

PARENT

V1

JOB

Add, price, retire items; browse the template gallery (movie night, screen time, skip-a-chore, sleepover); fulfill tickets. Skip-a-chore must actually remove the chore from the kid's board that week — the end-to-end proof.

YOUR CALL

- Suggested pricing: anchor templates to the family's weekly income (e.g. movie night $\approx 4\times$ weekly) or leave raw numbers?

Kid Detail & Access

PARENT

V1

JOB

One kid, fully: ledger (read-only — even parents can't edit history, and the UI says so proudly), income setting, sibling-visibility toggle, era controls, and access mode: shared device (big tappable avatar from the parent's app, optional PIN) or own device (join code, no email, stays signed in).

COPY

The append-only promise, in parent language: **“History can't be edited — by anyone. That's the point.”**

YOUR CALL

- Join code style: six digits, or three friendly words (easier for an 8-year-old to type)?

Household Settings & Privacy

PARENT

V1 • PRIVACY WRITTEN

JOB

Currency name/symbol, optional real-money exchange rate (**100 Mints = \$1**, off by default), notification digest (parent notifications batch to one per day, max), subscription, and the plain-language privacy page (COPPA posture: kid data is the parent's data; no tracking, no ads, ever — already written, ships day one).

YOUR CALL

- Expose the exchange rate to kids once set, or keep it parent-only until Canopy?

4 · Cross-cutting rules (every screen answers to these)

- **Progress is never a bar.** Rings, like tree rings — goals, streaks, vault countdowns, tenure.
- **Numbers never age.** Every Mint amount in Spline Sans Mono, tabular, in every era, forever.
- **Losses look like losses, once.** Red + arrow + one 200ms shake. Never gray-out, never shame words, no exclamation points on bad news.
- **Color never carries meaning alone** — arrows and signs always ride along. 4.5:1 contrast floor; gold text on light is always **#8A6A1B**.
- **Touch floors:** 64px Sprout → 48px Sapling → 44px after. Reduced motion gets fade-only everywhere.
- **Sound is scarce:** coin clink + interest chime in the young eras; from Grove, only loan payoff and graduation. Mute always wins.
- **Emoji end at Sapling.** Illustration ends at Sapling (Canopy keeps at most one hidden sprig — your call above).
- **No mascot.** The jar, the coin, and the plant are the characters.
- **The two standing checks:** parent's daily time under 60 seconds; and the one-sentence test — logo removed, someone still says *"that's the money app that grows up with your kid."*

MyMomentous · money is grown, not given · reply on any card's "Your call" items and I'll fold your decisions into the spec and the build.
